**EJ-TECHNOLOGIES LAUNCHES JPROFILER 3.0**  
**Many new features allow further insight**  
**into running Java applications**

**Munich, Germany, March 2, 2004** – ej-technologies GmbH, a leading vendor of Java tools, launched today JProfiler 3.0, the first all in one profiler designed to help developers manage performance risks throughout the development process and produce fast, reliable enterprise applications. Developers use profiling technology to identify performance bottlenecks and memory leaks during the development stage of an application. JProfiler is the only enterprise-level Java tool available today to the development community that integrates CPU, memory and thread profiling in one powerful and robust application. JProfiler 3 is available worldwide immediately.

“With the new reference and method graphs, JProfiler is now really top of its class.” said Dr. Ingo Kegel, CEO of ej-technologies. “JProfiler 2 has won the JDJ Readers Choice Award 2003 for the best profiling tool. With JProfiler 3 we are confident to fulfill the high expectations and trust that thousands of developers around the world have placed in ej-technologies’ products.”

The full array of features integrated in JProfiler makes this product an excellent quality assurance tool and an ideal supplement to conventional debuggers. The early integration of JProfiler into the development process enhances the quality of the final application and reduces overall programming issues that usually arise far later and at higher cost.

The latest release of JProfiler adds:

- A redesigned heap walker with reference graphs.
- Method graphs for CPU profiling.
- An allocation hot spot monitor.
- Automatic deadlock detection.
- Undocking of views into separate top-level windows.
- Much improved export capability.
- Support for recent JVMs, application servers and IDEs.
- Performance improvements for long-running applications.
- Many smaller enhancements and usability improvements.

**About ej-technologies:**

ej-technologies GmbH was founded in 2001 as a privately held company and specializes in solutions that help programmers make the most of their own applications. With its focused expertise in areas of performance, security and deployment, ej-technologies is developing the next generation of enterprise development tools.
