EJ-TECHNOLOGIES LAUNCHES INSTALL4J 2.0
install4j adds support for services and customizable GUI installers
on all mainstream platforms

Munich, Germany, October 23, 2003 – ej-technologies GmbH launched today install4j 2.0, a Java cross platform installer that helps software developers to deploy their applications on all mainstream platforms. install4j creates native application launchers and media files for Microsoft Windows, Linux, Mac OS X and UNIX. install4j is available worldwide immediately.

“install4j 2.0 includes many new features that are essential for enterprise customers” said Dr. Ingo Kegel, CEO of ej-technologies. “Support for server applications and the ability to customize the installer with custom actions and custom screens are just the highlights in the long list of improvements.”

Starting with install4j 2.0, ej-technologies offers two editions with different feature sets: the *Professional Edition* and the *Enterprise Edition*.

install4j 2.0 adds the following features:

- support for service launchers and service installation
- API for custom screens and custom actions
- GUI installers for all supported platforms
- “dynamic JRE bundling”: download on demand of a JRE
- fine-grained control of overwrite policy, uninstallation policy and UNIX file permissions
- support for external launchers
- generation of Windows XP icons for Windows launchers
- generation of a version information resource for Windows launchers
- possibility to limit launchers to a single running instance
- new media file type for Mac OS X that supports multiple launchers
- customization of the installer GUI
