## **EJ-TECHNOLOGIES LAUNCHES INSTALL4J 4.0**

**Munich, Germany, October 09, 2006** – ej-technologies GmbH launched today install4j 4.0, a Java cross platform installer builder that helps software developers to deploy their applications on all mainstream platforms. install4j creates native application launchers and media files for Microsoft Windows, Linux, Mac OS X and UNIX. install4j 4.0 is available worldwide immediately.

“With install4j 4.0 we bring a totally new kind of flexibility to installer authors” said Dr. Ingo Kegel, CEO of ej-technologies. “The new screen and action system supports uncountable new use cases. The possibility to design installer screens directly in the install4j IDE and wire them together with installation actions is powerful and intuitive at the same time.”

install4j 4.0 adds the following major features:

- Free configuration of screens for installer and uninstaller
- Free configuration of actions for each screen
- Configurable "Form screens" for designing your own installer screens
- Configurable error handling and rollback behavior for actions and screens
- Possibility to enter custom code directly in the install4j IDE
- Console installers and uninstallers
- Multi-language installers
- Multiple installation roots and "magic" folders
- Installation component tree with optional component descriptions and dependencies
- Net installers that download selected components at runtime
- CD installers with externalized data files
- Support for Microsoft Vista, including configurable execution level and code signing integration
- Support for 64-bit Windows launchers that work with 64-bit JREs
- Extensibility: API based on the JavaBeans specification for adding standard screens, actions and form components to install4j
- Optional Pack200 compression for all JAR files
