## **EJ-TECHNOLOGIES LAUNCHES JPROFILER 6.0**

**Munich, Germany, November 02, 2009** – ej-technologies GmbH, a leading vendor of Java tools, launched today JProfiler 6.0, the premier all in one profiler designed to help developers manage performance risks throughout the development process and produce fast, reliable enterprise applications. Developers use profiling technology to identify performance bottlenecks and memory leaks during the development stage of an application. JProfiler is the most powerful enterprise-level Java tool available today to the development community that integrates CPU, memory and thread profiling in one powerful and robust application. JProfiler 6 is available worldwide immediately.

“The unique new feature of exceptional method runs allows the analysis of the slowest invocations of selected methods in isolation” said Dr. Ingo Kegel, CEO of ej-technologies. “This is something that has not been possible with any tool until now. Another area with exiting changes is monitor profiling. Among other things, we’ve added powerful locking graphs that make it easy to analyze complex situations.”

The full array of features integrated in JProfiler makes this product an excellent quality assurance tool and an ideal supplement to conventional debuggers. The early integration of JProfiler into the development process enhances the quality of the final application and reduces overall programming issues that usually arise far later and at higher cost.

The latest release of JProfiler adds:

- Current locking and locking history graphs
- Thread dumps view
- Method statistics view
- Exceptional method runs: Analyze the slowest executions of selected methods in detail
- "Tree map" view mode in all call tree views and the biggest objects view of the heap walker
- Auto-tuning for dynamic instrumentation: Methods with disproportional overhead will be suggested for a list of ignored methods

- Simplified manual configuration of profiling with a single -agentpath VM parameter for Java 5+
- Changing profiling settings without restarting the profiled JVM for Java 6+
- Loading snapshots from IDE integrations
- Support for FreeBSD x86 and Linux PPC

**About ej-technologies:**

ej-technologies GmbH was founded in 2001 as a privately held company and specializes in solutions that help programmers make the most of their own applications. With its focused expertise in areas of performance, security and deployment, ej-technologies is developing the next generation of enterprise development tools.
