EJ-TECHNOLOGIES LAUNCHES INSTALL4J 3.0
install4j increases competitveness with new features
and secures place as a top-class installer package

Munich, Germany, July 01, 2004 – ej-technologies GmbH launched today install4j 3.0, a Java cross platform installer that helps software developers to deploy their applications on all mainstream platforms. install4j creates native application launchers and media files for Microsoft Windows, Linux, Mac OS X and UNIX. install4j 3.0 is available worldwide immediately.

"Based on customer feedback, install4j 3.0 has greatly expanded its feature breadth" said Dr. Ingo Kegel, CEO of ej-technologies. "install4j now has all mainstream installer features. Together with its excellent usability and quality of the generated installers install4j is now poised to become the mainstream installer for the Java platform."

install4j 3.0 adds the following features:

- user variables
- installation components
- file associations that can be configued in the GUI
- custom tasks
- redesigned management of custom code
- unattended installations
- advanced tasks for customizing the installer
- configurable access rights for directories on Unix platforms
- improved custom script entry
- sub-folders in the Windows program group menu
- a reboot option on Windows
- an improved build console
- an HTML Project report
- a wizard for creating JRE bundles
- improved error handling for the installer
- many enhancements in the API, ant task and the installer
