EJ-TECHNOLOGIES LAUNCHES JPROFILER 2.1 First All In One Java Tool Designed To Boost Quality And Productivity of Application Development

Munich, Germany, Sept. 05, 2002 – ej-technologies, GmbH launched today JProfiler 2.1, the first all in one profiler designed to help developers manage performance risks throughout the development process and produce fast, reliable enterprise applications. Developers use profiling technology to identify performance bottlenecks and memory leaks during the development stage of an application. JProfiler is the only enterprise-level Java tool available today to the development community that integrates CPU, memory and thread profiling in one powerful and robust application. JProfiler is available worldwide immediately.

“Assuring high quality enterprise suitability for Java applications and server components is very time consuming and critical to all developers,” said Dr. Ingo Kegel, CEO of ej-technologies. “Through JProfiler’s unique feature set and easy to use graphical interface, developers can now rely on a single tool to control and boost the quality and the overall performance of their application.”

The full array of features integrated in JProfiler makes this product an excellent quality assurance tool and an ideal supplement to conventional debuggers. The early integration of JProfiler into the development process enhances the quality of the final application and reduces overall programming issues that usually arise far later and at higher cost.

JProfiler offers the following features:

- CPU, memory and thread profiling integrated in a single application
- Modern and intuitive graphical interface organized around 4 perspectives: Memory, CPU, Threads and JVM telemetry graphs
- Powerful and intuitive application server integration wizard
- CPU profiling via full instrumentation, sampling and ej-technologies-developed dynamic instrumentation
- Support of the leading J2EE application servers via the application server integration wizard including: BEA Weblogic, IBM Websphere, Sun ONE Application Server, Oracle 9i Application Server and Apache Tomcat

- Strong integration with Integrated Development Environments (IDEs) including Netbeans, Sun ONE Studio, Eclipse and Borland JBuilder
- Support of the following platforms: Windows 98, Windows NT 4.0, Windows 2000, Windows XP, Linux x86, Mac OS X, Solaris 7/8/9 SPARC

About ej-technologies:

ej-technologies GmbH was founded in 2001 as a privately held company and specializes in solutions that help programmers make the most of their own applications. With its focused expertise in areas of performance, security and deployment, ej-technologies is developing the next generation of enterprise development tools.
